

Normal forms for three-dimensional vector fields under desingularization

DANIEL PANAZZOLO

Faculté de Sciences et Techniques, Université de Haute-Alsace, Laboratoire de Mathématiques, Informatique et Applications, Mulhouse, France

We will discuss the problem of resolution of singularities for three-dimensional vector fields. In particular, we will give a list of final local models which allow a complete formal classification. If time permits, we will also discuss some aspects of analytic classification of such final models.
