On periodic orbits in non-smooth differential equations with applications

RAFEL PROHENS

Departament de Ciències Matemàtiques i Informàtica, Universitat de les Illes Balears, Mallorca, Spain

In this talk we present a review of some results concerning limit cycles in non-smooth differential equations. This review is not intended to be exhaustive, but rather to show some problems on which we have been working in this field. Regarding neuroscience some results on which we are currently working on, controlling periodic orbits and their period for use in estimating the conductances, will also be presented.
