

Random complex dynamics

Anna Zdunik

During recent years there has been growing interest in random dynamical systems. I will start with some elementary questions in real one-dimensional dynamics, and pass to conformal random dynamical systems. The subjects will include:

- (1) random circle homeomorphisms
- (2) random Mobius maps
- (3) random measures in Polish spaces
- (4) random conformal repellers; random conformal measures; dimension of random conformal repellers; dependence on parameters
- (5) random iterates of transcendental maps, random Julia and radial Julia sets.
